1 INTRODUCTION & BACKGROUND

1.1 Objective & Background

This review has been undertaken in order to document some of the evidence that is currently collected within Designated Landscapes (DL) in Wales. The objective is to identify areas of commonalities and of differences or gaps in monitoring, and to encourage a collaborative approach to ongoing and future monitoring by identifying data and modelling outputs of the Environment & Rural Affairs Monitoring and Modelling Programme¹ (ERAMMP) and of the Glastir Monitoring and Evaluation Programme² (GMEP) that are of greatest interest and impact to the Designated Landscape managing authorities ('DL Bodies'). It should be noted that the report does not provide a complete inventory of all monitoring activities but only those reported by the individuals nominated for interview by the DL Bodies at the time.

1.2 Structure and Method

The ERAMMP DLs Monitoring and Liaison Officer carried out structured interviews with the eight DL Bodies in 2019.

The purpose of these interviews were to identify various aspects of the data holdings and data collection including: what, why, how, when and who collected the data, who the data holder is, its availability and any known reporting.

Additionally, the DL Bodies were asked to fill in two additional tables.

- Priorities for potential future GMEP data extraction and analysis
- Priorities for ERAMMP modelling scenarios to inform potential future ERAMMP modelling work.

See Appendix 6.3 for the questionnaire *pro forma* that was used for all interviews and Appendices 6.4 and 6.7 for the DL Bodies' responses and a summary table of 'Why, What, When & How'. The responses from the eight DL Bodies summarises the current, self-reported, monitoring work ongoing within the DLs, followed by a mapping exercise to map current activities onto current DL management plans - thus identifying potential evidence gaps.

The review also summarises the priorities both individually and collectively for the DL Bodies for possible future collaborative work with respect to GMEP/ERAMMP monitoring and modelling outputs.

² <https://www.gmep.wales>

2 MONITORING ACTIVITIES IN THE DLs

2.1 Overview of Monitoring

As a part of the structured interviews conducted with the DL Bodies, each was asked to give a brief summary of the number and type of monitoring programmes they were aware of that had taken place within their respective designations. Representatives were asked to give information even if they were unsure of the exact details, period, method or availability of any data collected. The purpose was to develop an overarching understanding of the types of monitoring activities that have taken place and what research has been focused on.

Note that this report only captures monitoring that was stated as part of the structured interviews conducted by the DL Monitoring and Liaison Officers with the DL Bodies; any monitoring activity that was not brought to the attention of the DLs Monitoring and Liaison Officers is not included in this report.

A wide range of monitoring indicators were reported, so these were categorised into 10 monitoring groups with further sub-categories to more easily visualise and interpret the results (see Appendix 7.1). The results of this data collection can be seen in Figure 2-1.

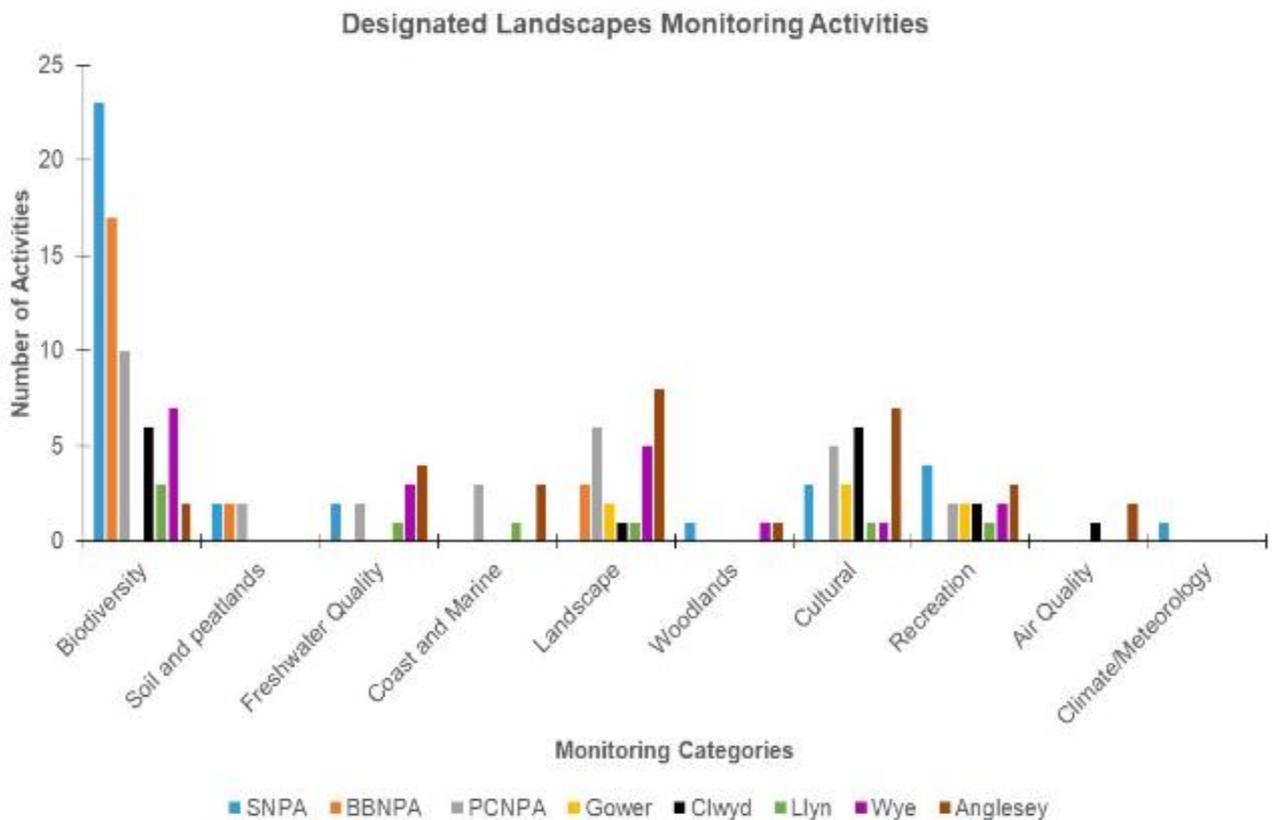

Figure 2-1: Number of monitoring activities by top level category reported by the DL Bodies.

2.2 Observed Trends

Initial observations highlight four main monitoring areas that are more prominent than others;

1. Biodiversity
2. Landscape
3. Cultural
4. Recreation

The majority of DL Bodies monitor each of these areas to some extent or are aware of monitoring by other organisations within their designations. See Figure 2-2 to 2-5. Each is examined in more detail below.

Appendix 7.2 shows a summary of data collectors, data holders, data reporters and date of data collection of the stated monitoring activities of the DL authorities.

2.2.1 Biodiversity

Figure 2-1 identifies biodiversity as the most frequent category of current and historical monitoring within the majority of the DL Bodies, particularly that of the National Parks (NPs). The majority of the biodiversity monitoring schemes are focused on mammal, vegetation, birds, pollinators and invasive species.

Biodiversity monitoring activity is generally higher within the NPs than the AONBs with mammal and vegetation monitoring occurring more often.

DL Bodies that have significant coastal zones i.e. PCNPA, Llŷn AONB and Anglesey AONB, have coastal and marine monitoring not present in inland designations.

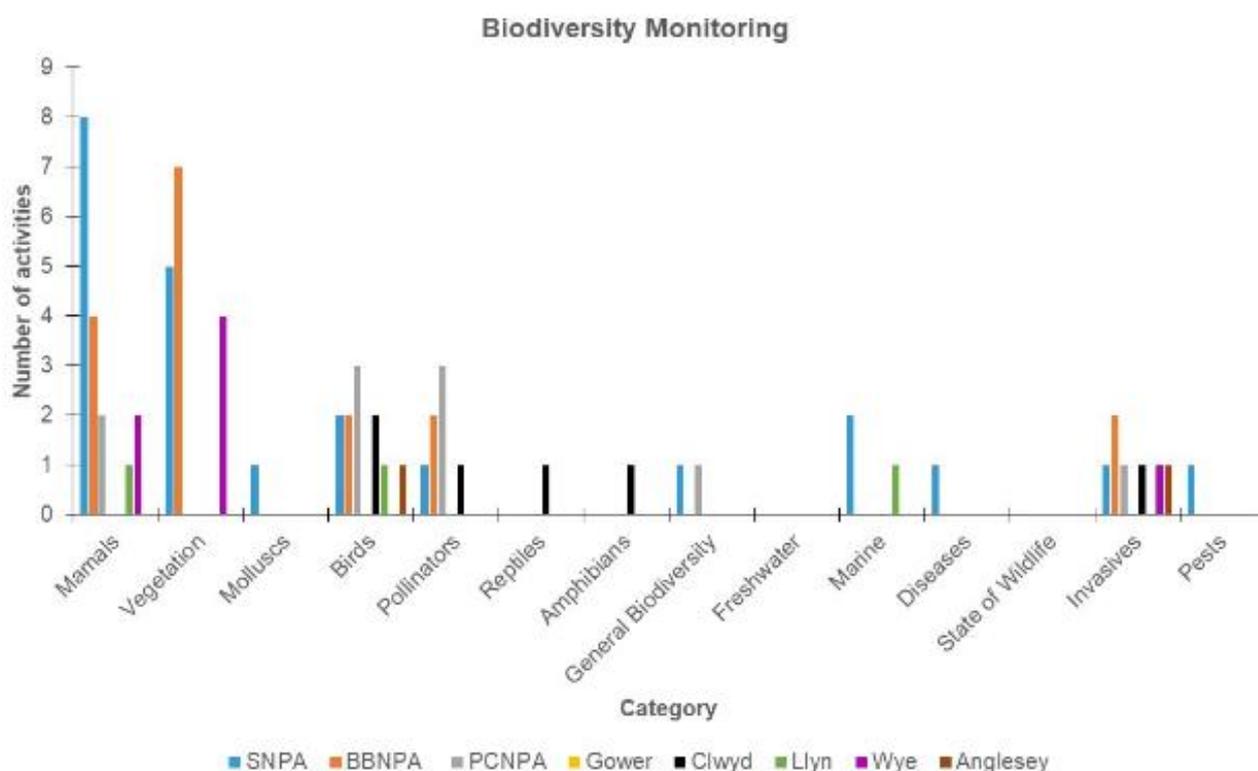

Figure 2-2: Number of biodiversity monitoring activities reported by the DL Bodies

2.2.2 Landscape

Monitoring of landscape feature monitoring is more prevalent within the AONBs compared to NPs in terms of number of categories. This is primarily focused on Site of Special Scientific Interest/ Special Areas of Conservation (SSSI/SAC) with 5 of the 8 DL Bodies having at least one monitoring scheme associated with this landscape type. Footpath condition assessment is also a frequently reported activity; with four monitoring schemes across the DLs. Monitoring of the overall state of the DL was reported for both Anglesey and Gower.

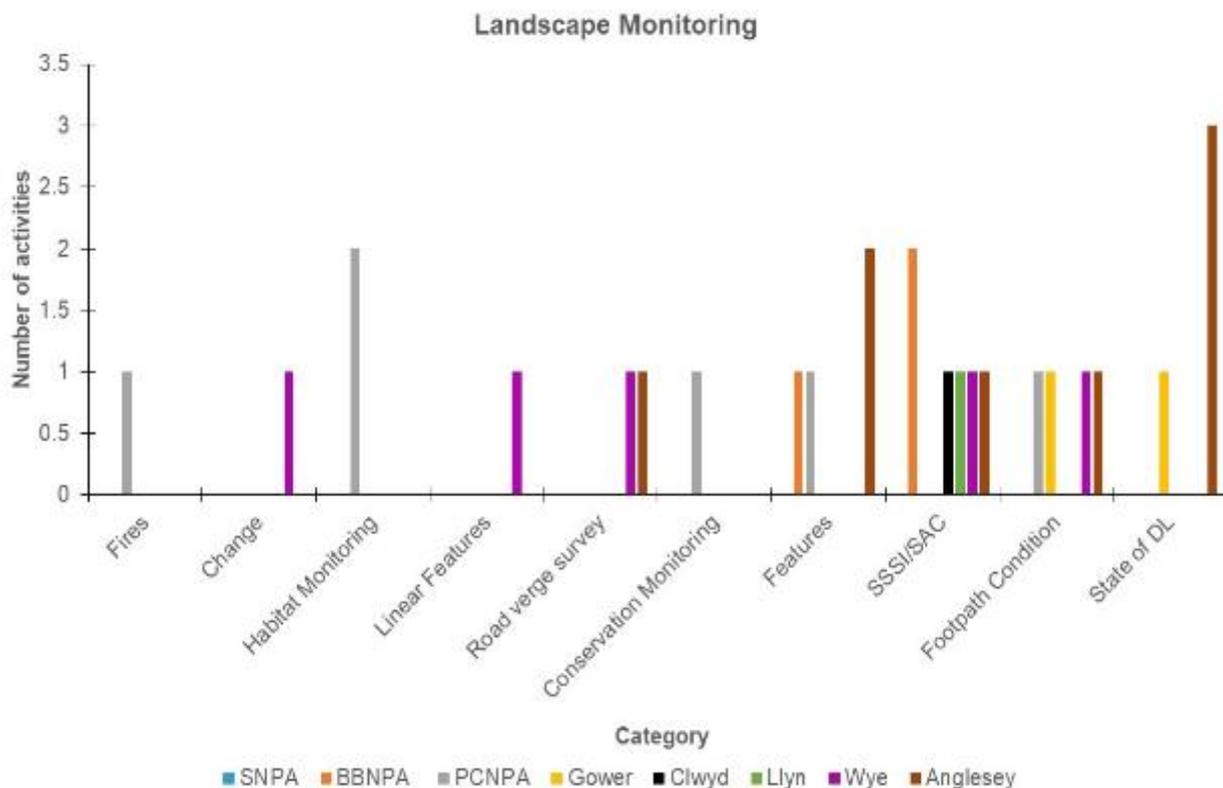

Figure 2-3: Number of landscape monitoring activities reported by the DL Bodies.

2.2.3 Cultural

Cultural monitoring can be seen as equally monitored within NPs and AONBs.

Dark/Night Skies quality appears as a priority for 6 of the 8 DL Bodies. International Dark-Sky Association, International Dark Sky Reserve accreditation has been achieved by BBNPA (in 2013) and SNPA (in 2015). Monitoring of historic environment features (HEFs) is in place for over half of the DL Bodies.

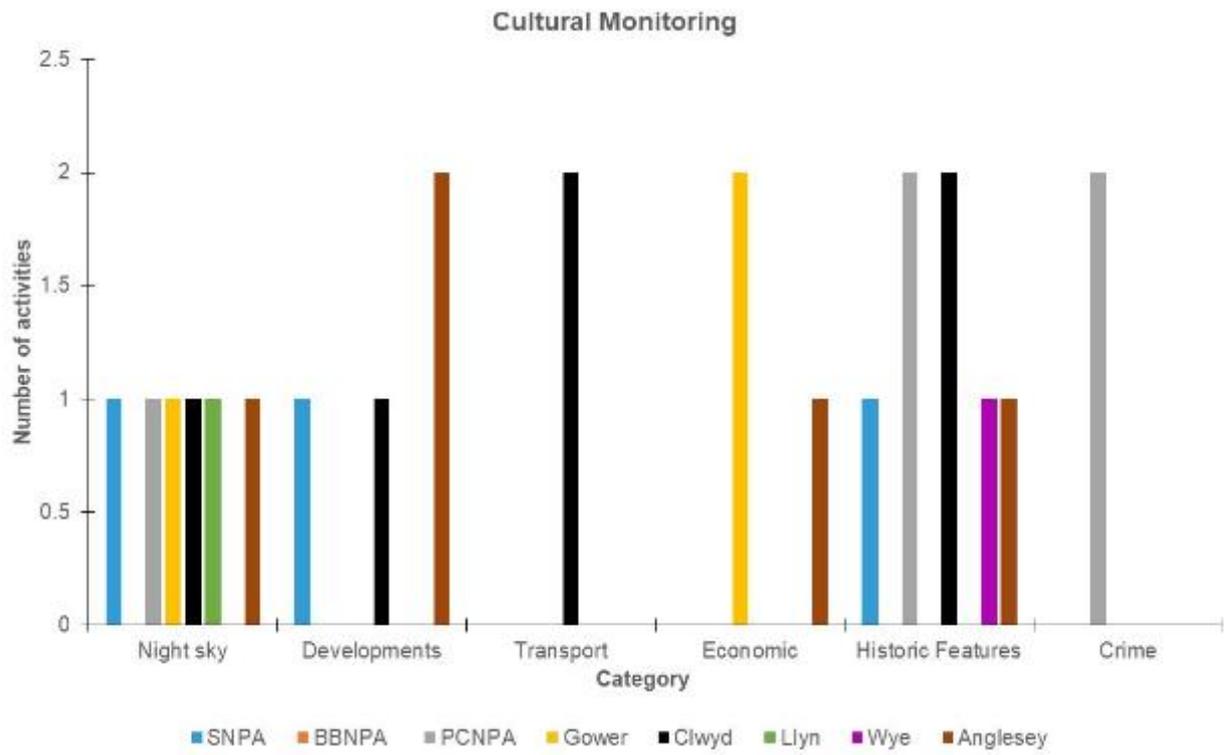

Figure 2-4: Number of cultural monitoring activities reported by the DL Bodies.

2.2.4 Recreation

Recreation monitoring is dominated by visitor number and path user records and is present in 7 of the 8 DLs. Monitoring of retail activities, visitor and resident surveys have also been undertaken by some DL Bodies.

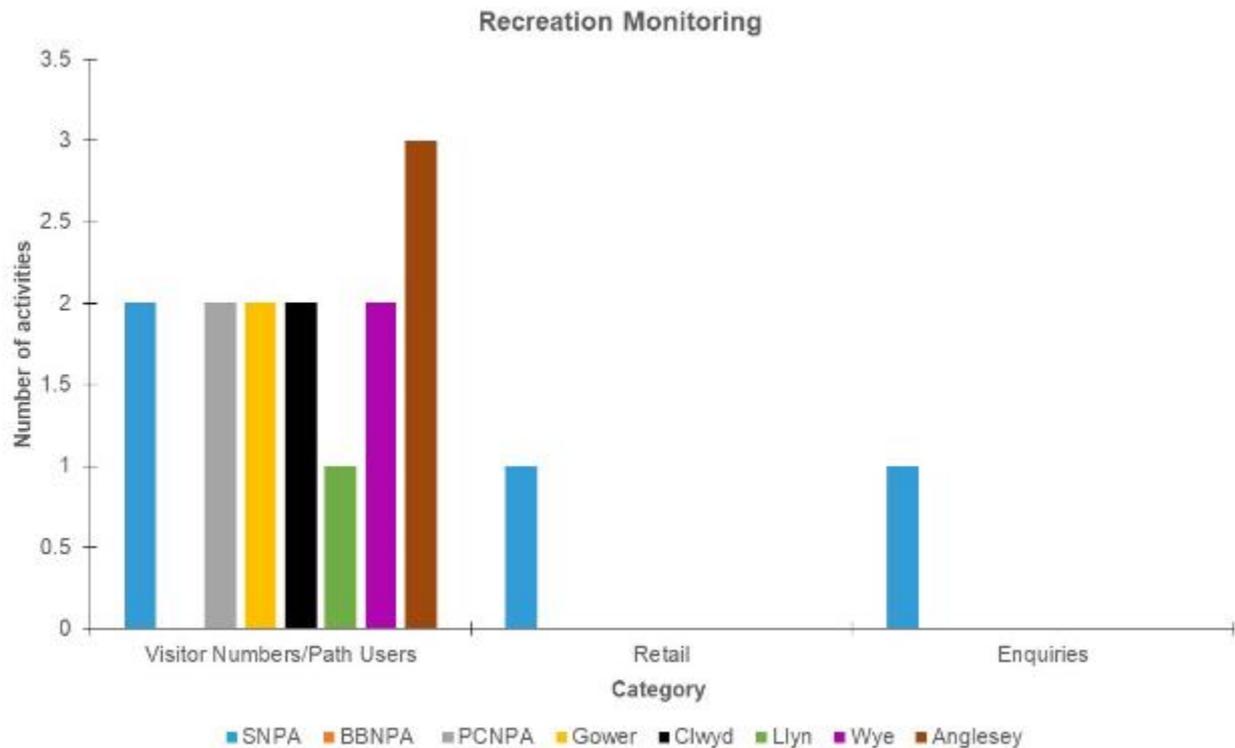

Figure 2-5: Number of recreation monitoring activities reported by the DL Bodies.

2.2.5 Other Monitoring Activities

Other monitoring programmes that were reported:

- **Soil and peatlands:** Only stated as taking place within the NPs.
- **Freshwater Quality:** Monitoring activity is relatively high in DL Bodies where it is being monitored but is restricted to only 5 DL Bodies overall.
- **Coast and marine:** Only evident in 3 DL Bodies with significant coastal zones.
- **Woodlands:** Monitoring is low with just 3 monitoring schemes stated across the 8 DL Bodies.
- **Air quality:** Low monitoring with just 3 schemes in 2 DL Bodies. Those reporting activity are embedded in national networks where the work is delivered by specialist organisations.
- **Climate/Meteorology:** One scheme within SNP that has a dedicated Meteorological Station.

Several reporters also noted that universities and NGO's are doing much monitoring within the DL areas. For example, freshwater quality, bird tagging, bat surveys and other annual surveys.

2.3 Key Observations

The key observations assessed by the ERAMMP DL Monitoring and Liaison Officers from the information provided in the interviews are:

- KO1 - Biodiversity monitoring activity is the most common monitoring activity reported by DL Bodies. The most commonly monitored biodiversity indicators are vegetation, mammals (with birds most measured within this category), pollinators and invasive species.
- KO2 - Beyond biodiversity monitoring activities, there is variable low level coverage reported for other monitoring categories across both NPs and AONBs.
- KO3 - Reporting of monitoring of parameters which require more investment in instrument and analytical methodologies (e.g. air quality) are significantly lower than that requiring specialist taxonomic and survey skills only (e.g. biodiversity and landscape features).

3 STAGE 2 - GLASTIR OUTCOMES & GMEP DATA

3.1 Overview of GMEP Data

The second stage of the structured interviews was to gain insight into each of the DL body’s data extraction and analysis preferences from the GMEP data archive and likely interest in ERAMMP survey data.

This was done to prioritise and disseminate data where appropriate. The GMEP data available for extraction and analysis (Table 3-1) relate to the primary outcomes of the Glastir sustainable land management scheme:

- Biodiversity
- Climate Change mitigation
- Soil and Water Management
- Landscape, Historic Environment and Access
- Woodland creation and management

Table 3-1: Mapping available GMEP data to Glastir outcome

Glastir Outcome	Data collected in GMEP
Biodiversity	Plant diversity
	Birds
	Pollinators
	Floral abundance
	Linear features condition
Climate Change mitigation	Soil carbon
Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)
	Headwater stream macroinvertebrate community
	Pond quality
Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features
	Visual Quality Index
	Presence and length of Public Rights of Way, including open access areas and beaches.
Woodland creation and management	Woodland ground flora biodiversity

It is noted that many of these outcomes have sub divisions based on the data archive. However, it was decided that a DL body with an interest in plant diversity (for example) would also be interested in data for biodiversity in its entirety as it is a sub division of the outcome.

This has regrettably caused some confusion during the allocation of preferences [during the interviews], with some DL body representatives basing decisions on the outcomes (as intended) and some basing decisions on the individually collected data. Even so, great care has been taken to fairly represent each DL body’s preferences in this report. These have been compiled and are presented in Figure 3-2 and Figure 3-3.

3.2 Coverage of DLs by GMEP/ERAMMP Survey

Survey locations for both GMEP and ERAMMP were selected using an approach that ensured good coverage of all major land classes which are defined by characteristics such as climate, geology and topography. This approach ensured the survey captures a representative set of the major farm, woodland and land managed for habitat in Wales, as these land uses are closely linked to these fundamental landscape characteristics.

As part of the ERAMMP National Field Survey, a significant number of the original 300 GMEP 1km squares (Figure 3-1) will be re-surveyed, both within and outside of DLs, in 2021 and 2022.

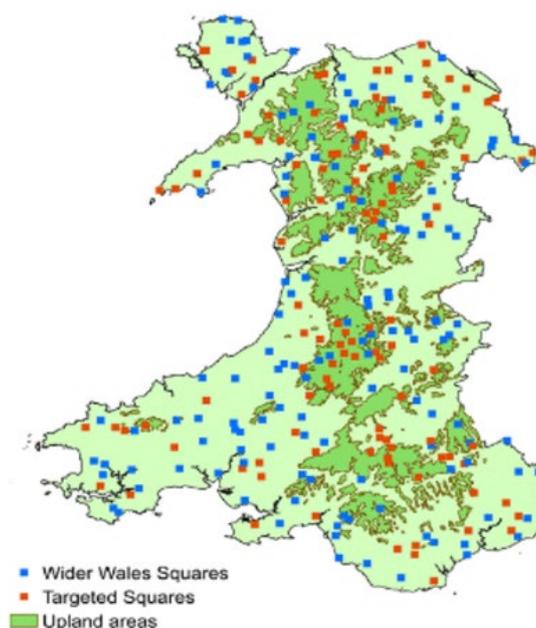

Figure 3-1: The approximate location of each GMEP Survey Square.

The number of squares and area in the original GMEP survey within each DL body can be seen in Table 3-1a. Approximately 38% of the squares in the GMEP survey are within DLs and 47% of the reduced ERAMMP survey planned as shown in Table 3-1b.

Table 3-2a: Number and area of the 300 GMEP Survey 1km squares within, or partially within, each Designated Landscape from 2013-2016 and the area and percentage of Designated Landscape in the GMEP survey.

Designated Landscape	DL type	No. of squares in DL	% of squares in DL	Area of DL in survey (ha)	% of DL in survey
Snowdonia	NP	57	19.00	5349	2.50
Brecon Beacons	NP	26	8.67	2411	1.79
Pembrokeshire Coast	NP	8	2.67	727	1.18
Ynys mon/Anglesey	AONB	11	3.67	851	4.51
Llŷn	AONB	6	2.00	411	2.67
Clwydian Range and Dee Valley	AONB	4	1.33	328	0.84
Gower	AONB	2	0.67	200	1.33
Wye valley	AONB	2	0.67	167	1.44

Table 3-3b: Number and area of the 130 ERAMMP Survey 1km squares planned for 2021-2022 within, or partially within, each Designated Landscape and the area and percentage of Designated Landscape in the ERAMMP survey.

Designated Landscape	DL type	No. of squares in DL	% of squares in DL	Area of DL in survey (ha)	% of DL in survey
Snowdonia	NP	34	26.15	3184	1.49
Brecon Beacons	NP	12	9.23	1127	0.84
Pembrokeshire Coast	NP	5	3.85	484	0.79
Ynys mon/Anglesey	AONB	6	4.62	411	2.67
Llŷn	AONB	4	3.08	328	0.84
Clwydian Range and Dee Valley	AONB	4	3.08	350	1.85
Gower	AONB	1	0.77	100	0.66
Wye valley	AONB	0	0	0	0.00

3.3 Method of Calculation – Collective Preference

The collective preference reported by all the DL Bodies was calculated using a weighting system in order to fairly represent each body's preferred five GMEP data categories. These weightings were allocated on a scale with 1st choice given a weighting of 50 declining to a weighting of 10 for 5th choice.

These weightings were tallied and the preference with the highest number was denoted the collective preference of the DL Bodies. An example of this can be seen in Appendix 6.5.

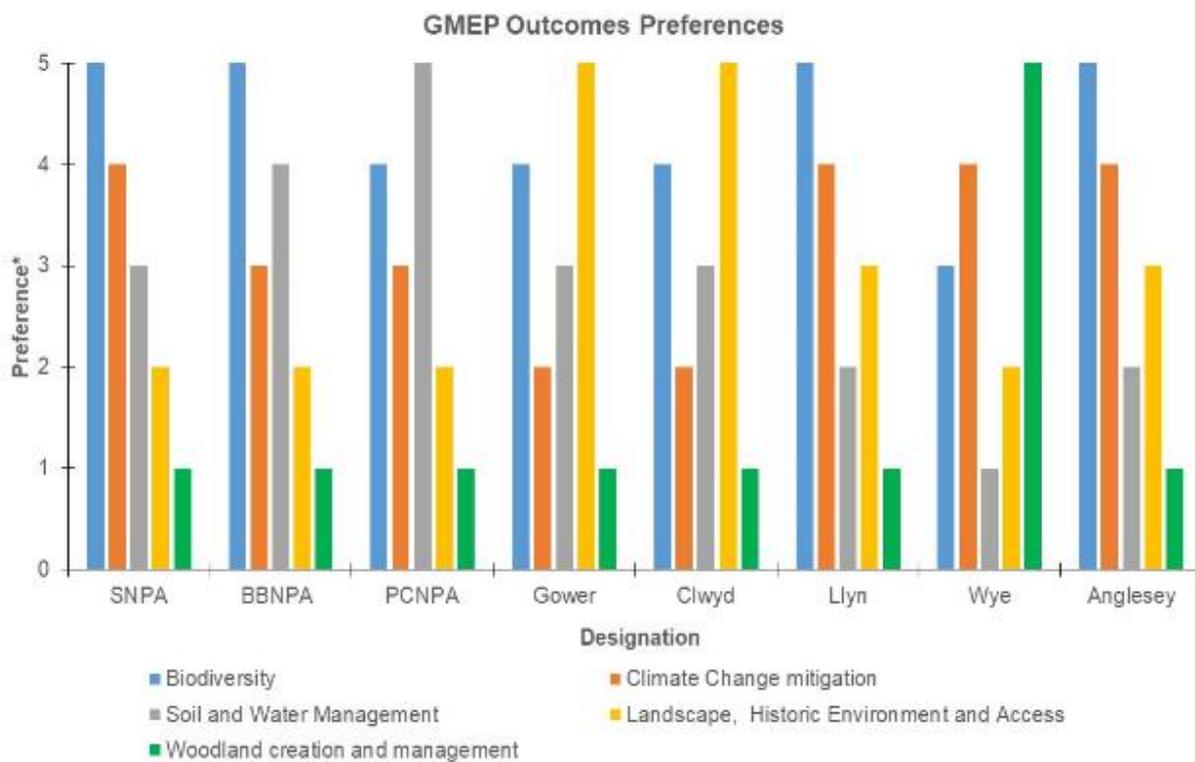

Figure 3-2: GMEP data category preferences reported by the 8 Designated landscape bodies.

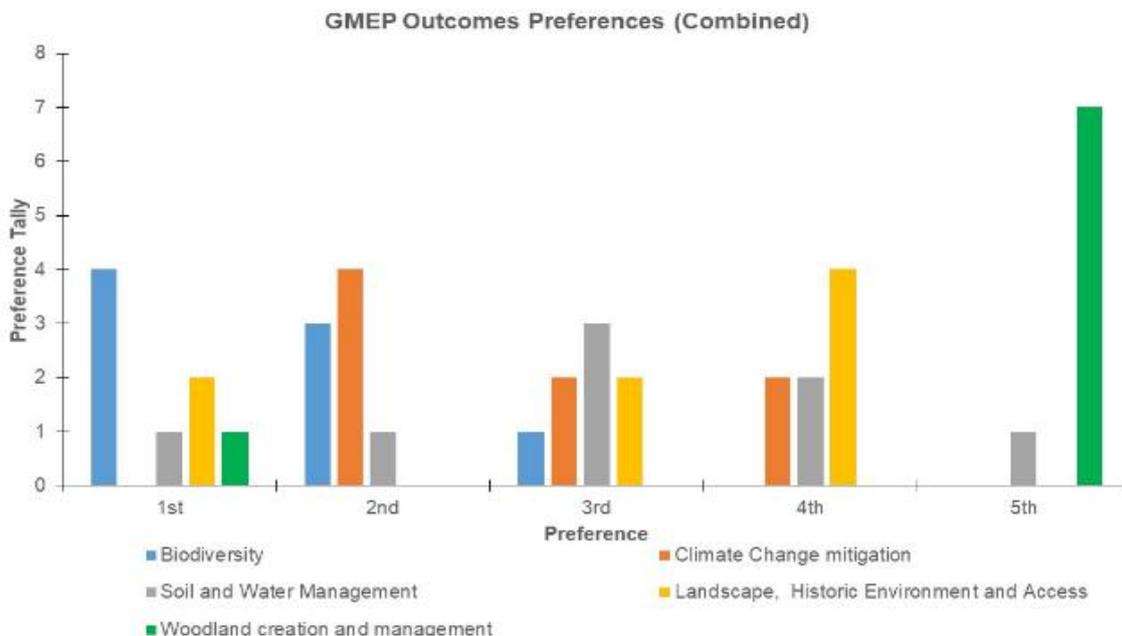

Figure 3-3: Weighted and combined GMEP data category preferences reported by the Designated landscape bodies.

This method was chosen in order to equally represent the varying choices of the DL Bodies as a whole, for example it takes into consideration that while the first choice for all DL Bodies may vary, the second choice may be consistent throughout and therefore it is fairly represented in the final outcome.

3.4 Observed Trends

The DL Bodies' collective preference of data extraction and analysis relating to the GMEP data categories was calculated and is presented in Figure 3-3 and is as follows:

- 1st Biodiversity
- 2nd Climate Change Mitigation
- 3rd Landscape, Historic Environment and Access
- 4th Soil and Water Management
- 5th Woodland Creation and Management

Biodiversity is consistently the highest preference data category with it being either the first or second highest priority for all but one of the DL Bodies (of which it was placed 3rd).

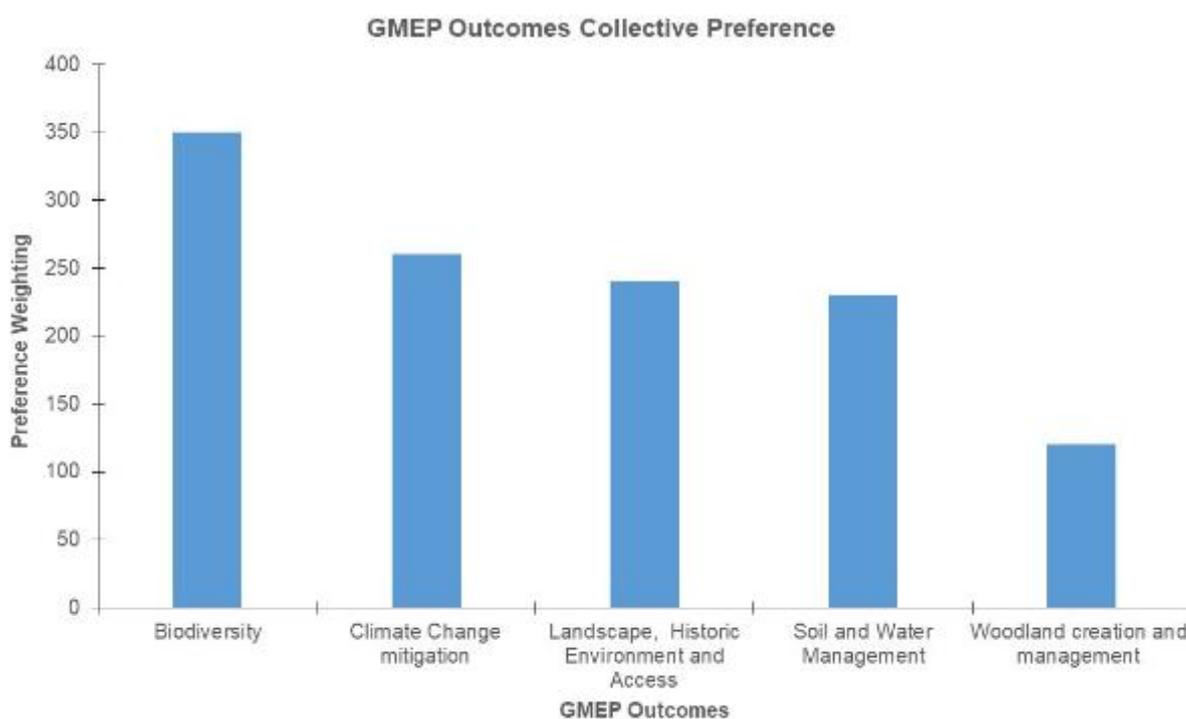

Figure 3-4: Collective preferences reported by the 8 Welsh Designated landscape bodies for data extraction and analysis in relation to the five GMEP data categories.

Even though Climate Change Mitigation, Landscape, Historic Environment and Access and Soil and Water Management are all close in terms of collective preference there was a definite preference for Climate Change Mitigation as it was placed as 2nd preference by half of the DL Bodies and in either 3rd or 4th by the remainder.

The spread of preference votes for Landscape, Historic Environment and Access and Soil and Water Management are more varied. Although Landscape, Historic Environment and Access was placed as 4th preference by half of the DL Bodies, its inclusion as 1st by two others means that collectively it is placed just ahead of Soil and Water Management.

It is clear that Woodland Creation and Management is collectively the lowest priority outcome as it was identified as the least preferred outcome by 7 of the 8 DL Bodies.

3.5 Key Observation

Priorities reported by the DL Bodies for data extraction and analysis from the GMEP archive are as follows:

KO4 - Data relating to the GMEP biodiversity data category is the collective favourite reported preference for targeted data extraction and analysis. Data relating to Woodland Creation and Management being collectively the least important priority for the DL Bodies reported.

The lower priority outcomes indicated by the DL Bodies were not reported as unimportant, but are what each designation sees as its lowest current data extraction and analysis priority.

4 STAGE 3 - MODELLING SCENARIOS

4.1 Overview of Modelling Scenarios

Quantifying the top four preferred scenarios from forthcoming modelling under ERAMMP was the final stage of the structured interviews. This was to inform the most sought after modelling information for the near future relating to:

- Options for future woodland planting and their impacts
- Management options for improving water quality
- Management options in the coastal zone
- New agricultural scheme testing

Details of the possible modelling scenarios as presented during the interviews are in Table 4-1.

Table 4-1: Possible future modelling scenarios as presented during the interviews

Modelling Scenario	Details
<i>Woodland (different special options, benefits)</i>	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.
<i>Water quality (Brexit modelling for water quality)</i>	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.
<i>Coastal management (paths/biodiversity)</i>	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.
<i>New agriculture scheme potential outcomes</i>	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.

4.2 Method of Calculation – Collective Preference

The method used here is the same as that used for the calculation in Section 3.2 (p.15). The rationale is also consistent, however here weightings were on a scale from 1st choice which was given a weighting of 40 to a weighting of 10 for a 4th choice.

An example of this can be seen in Appendix 6.6.

4.3 Observed Trends

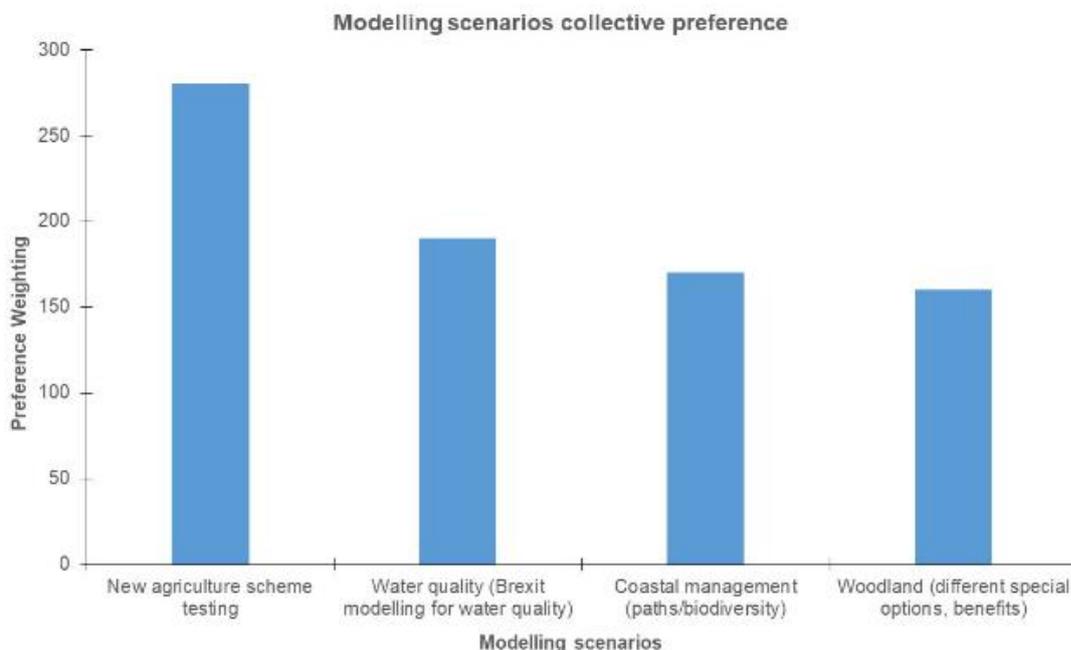

Figure 4-1: Collective Modelling Scenarios preferences reported by the 8 Welsh Designated landscape bodies.

The DL Bodies’ collective reported preference of Future Modelling Scenarios was calculated and is presented in Figure 4-1.

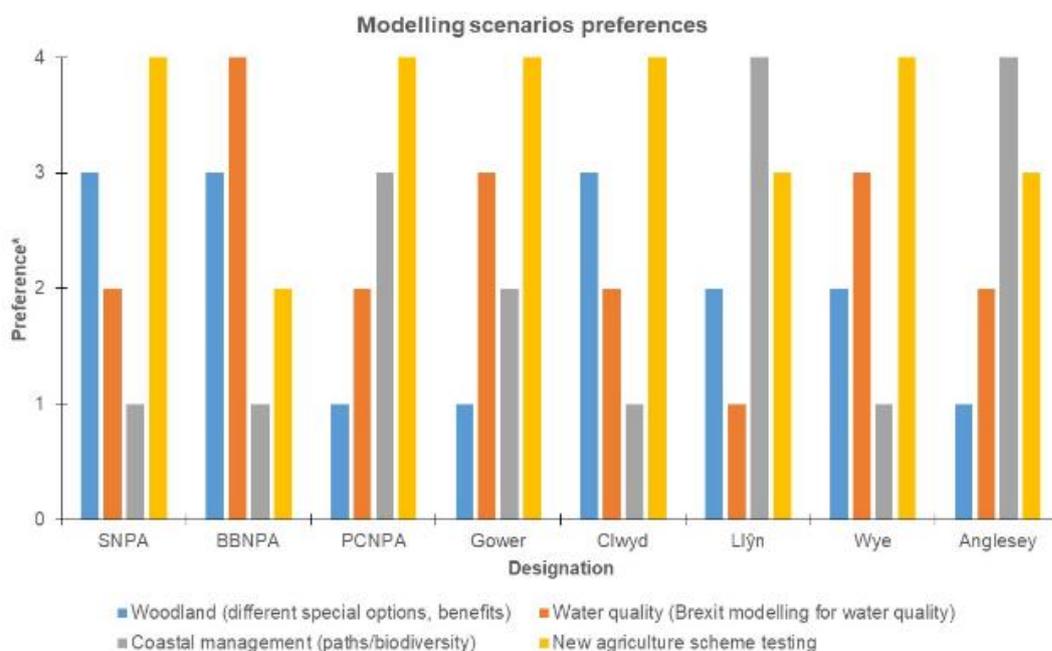

Figure 4-2: Modelling scenarios preferences reported by the 8 Welsh Designated landscape bodies. (4 being first choice, 1 being last choice).

A breakdown of each DL Body’s reported individual modelling scenario preferences can be seen in Figure 4-2 and Figure 4-3.

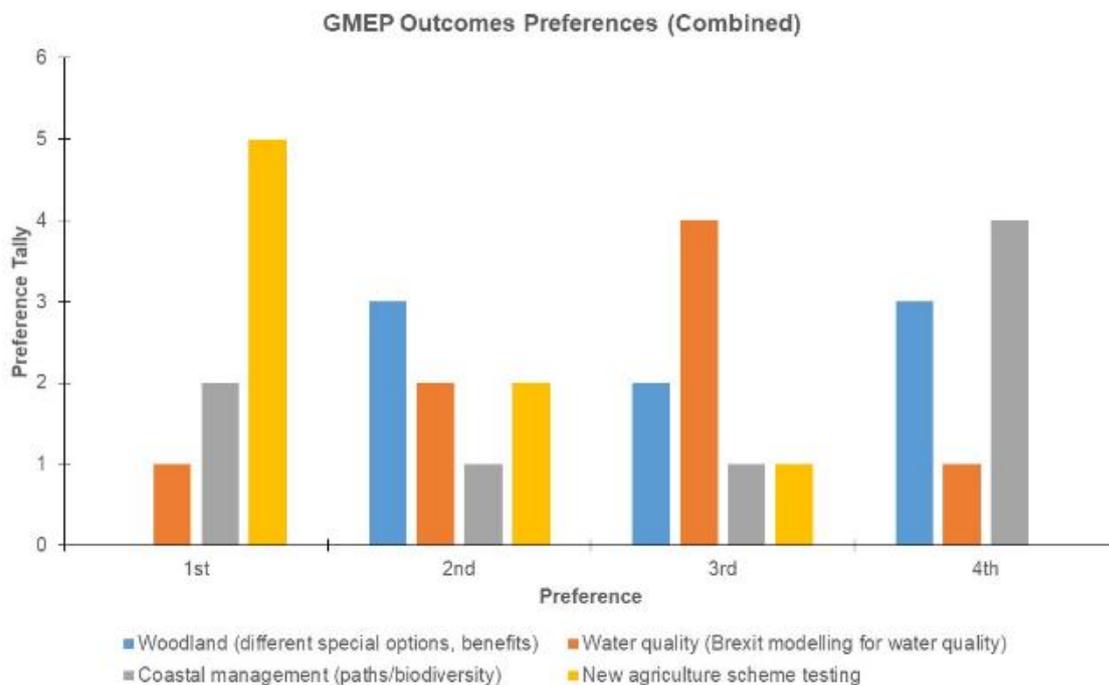

Figure 4-3: Modelling Scenarios preferences reported by the 8 Welsh Designated landscape bodies.

New agricultural scheme testing has emerged as the overwhelming favourite modelling scenario preference, receiving 5 1st choice votes, 2 2nd choices and 1 3rd choice.

Again, woodlands have been given the lowest priority. However, its position is only slightly lower than that of coastal management, but this is a feature that only 3 of the DL Bodies have cited as a key priority. Water quality enjoys a comfortable margin above the bottom two preference modelling scenarios although it is far behind ‘agriculture scheme testing’.

4.4 Key Observations

The key observations of modelling scenario preferences of the Welsh DL Bodies are:

KO5 - Targeted modelling outputs supporting ‘agriculture scheme testing’ (i.e., potential outcomes/effects) is the collective preference, followed as 2nd preference by water quality impacts modelling. Woodlands and coastal issues are both lesser preferences.

5 SUMMARY

This report has identified that monitoring of numerous parameters have been and are ongoing within the eight Designated Landscapes in Wales.

Biodiversity monitoring activities are generally higher within the NPs than the AONBs with the spread of monitoring activities in other categories relatively equal between NPs and AONBs.

Monitoring of parameters which require more technical methodologies are significantly lower than that requiring no instrumentation or specialist analytical support.

With respect to GMEP data related to different environmental, landscape and cultural outcomes, access and reporting of Biodiversity data is the overwhelming first preference, with Woodland Creation and Management the least important priority of the DL Bodies collectively.

With respect to the ERAMMP Modelling Scenarios, preferences show that agriculture scheme options is the first choice preference. Woodlands and coastal issues are both low in terms of preference but indicate a specialisation within different DL Bodies.

Key observations are:

- KO1 - Biodiversity monitoring activity is the most common monitoring activity reported by DL Bodies. The most commonly monitored biodiversity indicators are vegetation, mammals (with birds most measured within this category), pollinators and invasive species.
- KO2 - Beyond biodiversity monitoring activities, there is variable low level coverage reported for other monitoring categories across both NPs and AONBs..
- KO3 - Reporting of monitoring of parameters which require more investment in instrument and analytical methodologies (e.g. air quality) are significantly lower than that requiring specialist taxonomic and survey skills only (e.g. biodiversity and landscape features).
- KO4 - Data relating to the GMEP biodiversity data category is the collective favourite reported preference for targeted data extraction and analysis. Data relating to Woodland Creation and Management being collectively the least important priority for the DL Bodies reported.
- KO5 - Targeted modelling outputs supporting 'agriculture scheme testing' (i.e., potential outcomes/effects) is the collective preference, followed as 2nd preference by water quality impacts modelling. Woodlands and coastal issues are both lesser preferences.

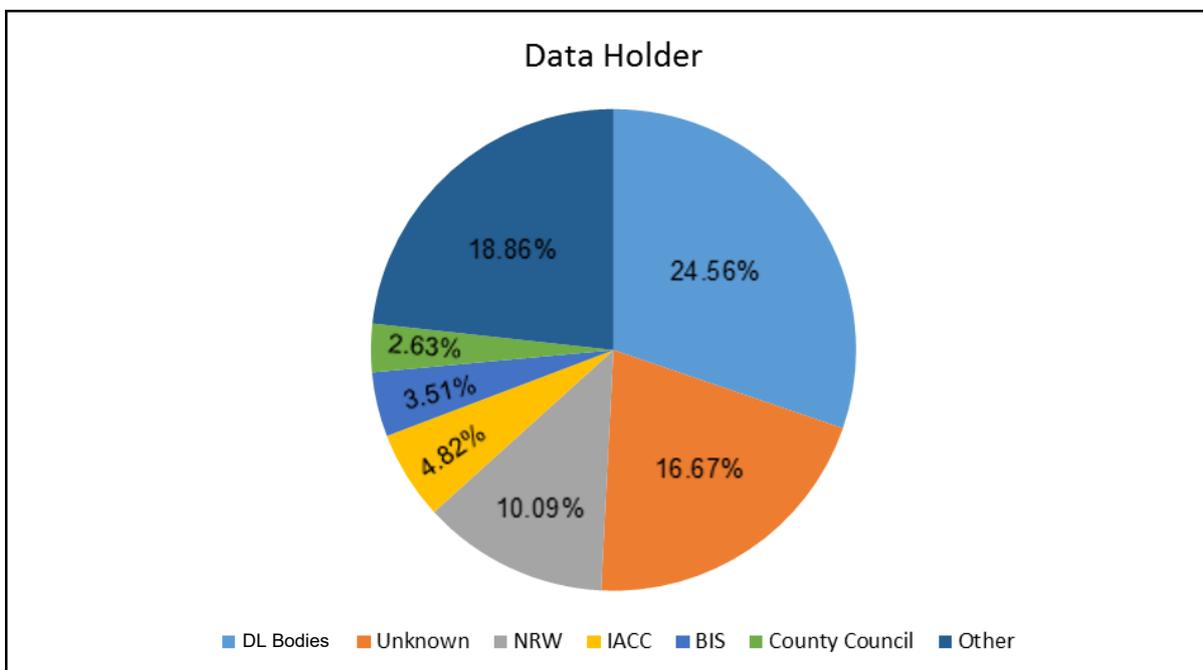

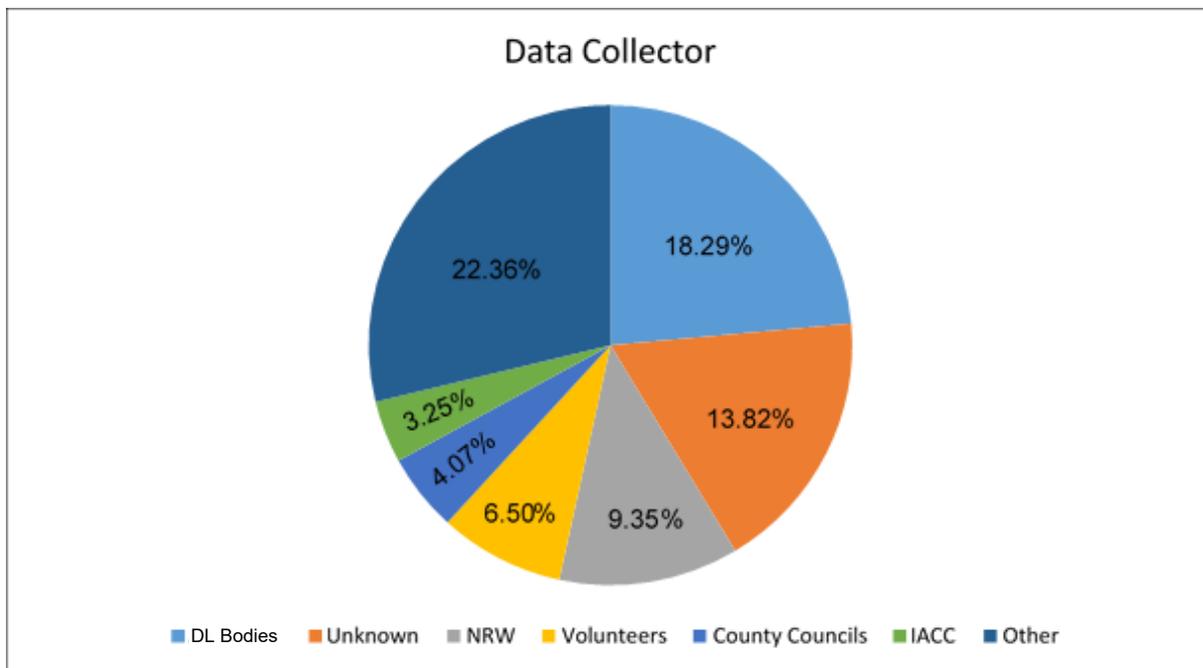

6 APPENDICES

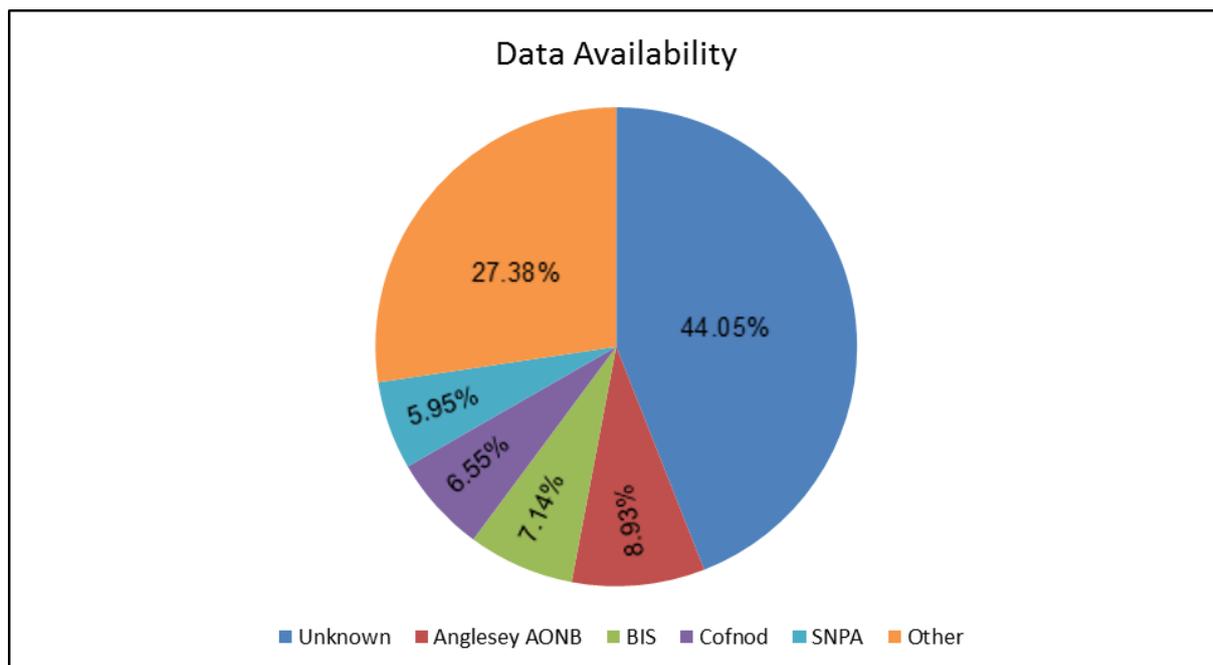

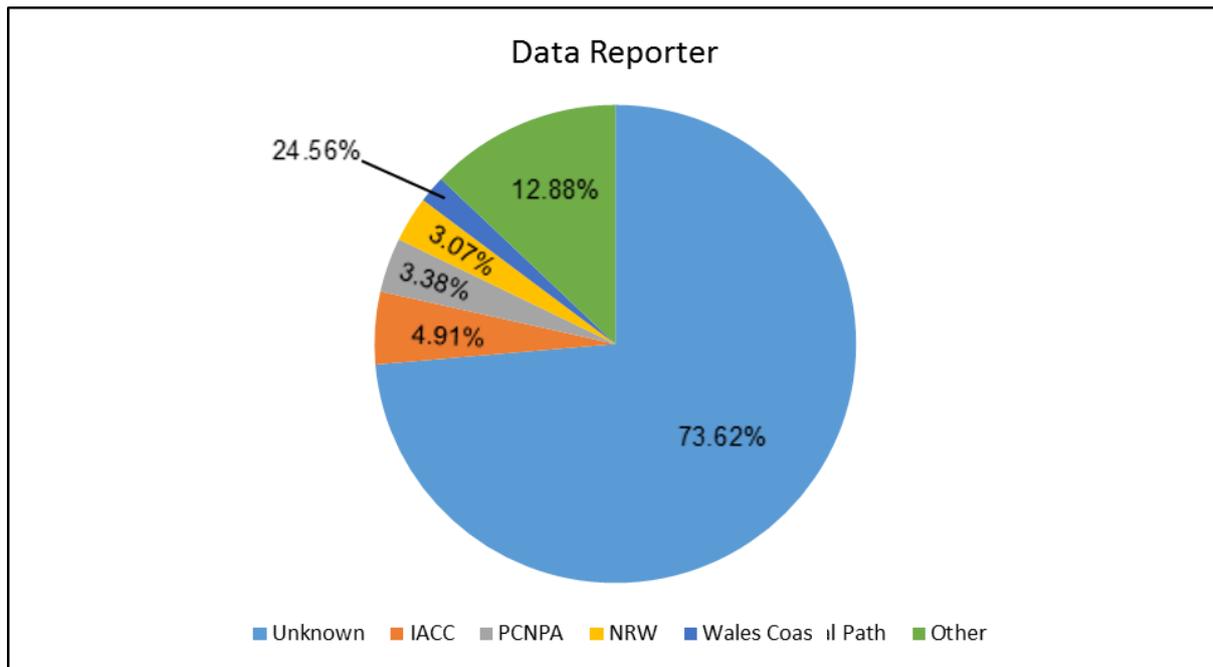

6.1 Monitoring Categories and Sub Categories

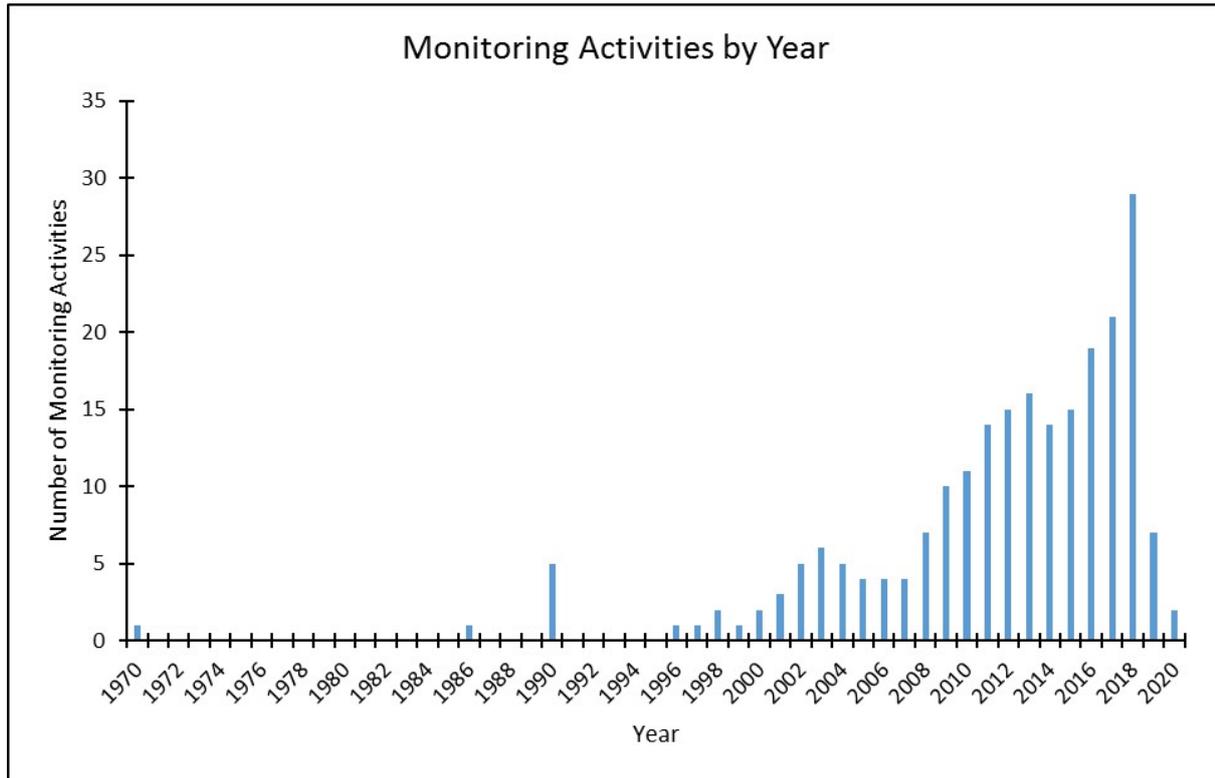

Monitoring Category	Sub Category
<i>Biodiversity</i>	Mammals Vegetation Molluscs Birds Pollinators Reptiles Amphibians General Biodiversity Freshwater Marine Diseases State of Wildlife Invasive Pests
<i>Soil and Peatlands</i>	Soil Peat Erosion
<i>Freshwater Quality</i>	Freshwater Quality
<i>Coast and Marine</i>	Coast and Marine
<i>Landscape</i>	Fires Change Habitat Monitoring Linear Features Road verge Survey Conservation Monitoring Features SSSI/SAC Footpath Condition State of the DL
<i>Woodlands</i>	Woodlands
<i>Cultural</i>	Night Sky Developments Transport Economic Historical Features Welsh Language Crime
<i>Recreation</i>	Visitor Numbers/Path users Retail Enquiries
<i>Air Quality</i>	Air Quality
<i>Climate/Meteorology</i>	Climate/Meteorology

6.2 Data Summaries

A summary of data collectors, data holders, data reporters and date of data collection activities of the monitoring activities reported by the DLs.

6.3 Questionnaire *Pro Forma* Blank

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review

Intro 1:

My name is _____ and I'm the ERAMMP Designated Landscape Monitoring and Liaison Officer, based at the Snowdonia National Park Authority. This roll aims to secure a coherent approach to monitoring and liaison with ERAMMP partners and landowners throughout the Welsh National Parks and Areas of Outstanding Natural Beauty.

Intro 2: Background

The objective of forming the DLMG is to explore possible collaborative working opportunities involving monitoring and modelling across the DLs (NP & AONBs) and has come as a request from the Minister for the Environment. The Minister has requested that this review is carried out in order to establish what evidence is collected within DLs in Wales, with relation to the ERAMMP programme, and if it's done in a collaborative and joined up manner.

These interviews demonstrates that the ERAMMP programme is invested in this review and is eager for this collaboration to be successful.

Intro 3: Interview content

This interview will take approximately 2 hours to complete and will involve 3 sections;

Monitoring activities: Why, what, when, how table

Prioritising GMEP data extraction for AONB and National Parks

Prioritise Modelling Scenarios for AONB and National Parks

Intro 4: Outputs

The responses from the 8 DLs will feed into a report reviewing monitoring across the designations. The review will be used to recognise evidence gaps within DLs and to prioritise possible future collaborative work. This review will be presented to Welsh Government.

Questionnaire

Question 1: What is the Name of your designation?

Question 2: What is your role and responsibilities?

Question 3: Fill in why, what, when, how table with questioner.

Question 4: In the table of GMEP outcomes and collected data, prioritise your preferred data extraction for DLs in the third column.

GMEP Outcome	Data collected	Priority Score
Biodiversity	Plant diversity	
Biodiversity	Birds	
Biodiversity	Pollinators	
Biodiversity	Habitat areas, linear features and point features; diversity and stock	
Biodiversity	Soil biodiversity	
Climate Change mitigation	Change in soil carbon	
Soil and Water Management	Soil status as indicated by soil physical and chemical properties	
Soil and Water Management	Soil status as indicated by biological measurements	
Soil and Water Management	Stream water and pond water quality as indicated by conductivity and pH, alkalinity, soluble reactive phosphorus and total oxidisable nitrogen	
Soil and Water Management	River Habitat Survey- assessing habitat character and quality of rivers based on physical characteristics	
Soil and Water Management	Pond quality assessment as indicated by water quality, pond characteristics, macroinvertebrate community, macrophyte cover and abundance	
Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
Landscape, Historic Environment and Access	Range of habitat and structural data built in to detailed 3D viewsheds for 1km sites and surrounding 3 x 3km	
Landscape, Historic Environment and Access	Presence and length of Public Rights of Way (PROW), including open access areas and beaches.	
Woodland creation and management	Woodland mapping	
Woodland creation and management	Woodland ground flora	

Question 5: Prioritise your top four modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	

Question 6: Is there anything else you would like to add?

6.4 The What, Why, How, When, Who Table

Number	Designation	What?	Why?	How?	When?	Who?	Data Holder	Data Availability	Reporting	Notes
1	Snowdonia National NPA	Number of footpath users	Unknown	People counters	Unknown	SNPA staff	SNPA	Unknown	Unknown	Unknown
2	Snowdonia National NPA	Dark sky quality	Reporting requirement of the IDA Dark Skies Reserve designation	Dark skies measurements taken in survey locations across the Park	2017, 2018, 2019	Dark Skies Officer and SNPA staff	SNPA	SNPA	Unknown	SNPA has an in-house Dark Skies Officer
3	Snowdonia National NPA	Enquiries to Information Centres (Aberdŷfi, Beddgelert, Betws y Coed)	STEAM reports (Gwynedd & Conwy) and for monitoring patterns for forward planning	People counter on entrances, daily log of enquiries by post, e-mail, phone calls	Collected Daily - Weekly figures back to 2001	Information Centre Staff - Collated by Engagement Department Admin	SNPA	Yes	Unknown	Historically data was kept for Visit Wales TIC Network. This has now disbanded but data still collected.
4	Snowdonia National NPA	Peat depth	National soil carbon stocks; National unified peat map	Actual peat depth measurements (Welsh Peatlands standardised monitoring protocol)	Spring/Summer 2018, 2019, 2020	Welsh Peatlands Sustainable Management Scheme Project Officer (North Wales) & partners	SNPA	Data management plan in development	Welsh Peatlands portal in development	Part of Welsh Peatlands Sustainable Management Scheme (Wales-wide partnership project led by SNPA)
5	Snowdonia National NPA	Peatland condition	To enable national reporting of state of Welsh peatlands; UK emissions inventory	Welsh Peatlands standardised monitoring protocol	Spring/Summer 2018, 2019, 2020	Welsh Peatlands Sustainable Management Scheme Project Officer (North Wales) & partners	SNPA	Data management plan in development	Welsh Peatlands portal in development	Part of Welsh Peatlands Sustainable Management Scheme (Wales-wide partnership project led by SNPA)
6	Snowdonia National NPA	Water quality	Unknown	Unknown	Unknown	SNPA	SNPA	Cofnod	Unknown	Historical data on water quality of lakes done in-house
7	Snowdonia National NPA	At minute time-scales, meteorological conditions,	Freshwaters are extremely vulnerable to a wide range of stressors including climate	Buoy at Llyn Tegid taking measurements	Unknown	UKLEON	UKLEON	ECN data are available in two main forms: summary	Unknown	Unknown
8	Snowdonia National NPA	glutinous snail	SSI monitoring	Standardise methodology	Unknown	NRW	NRW	Unknown	Unknown	Unknown

36	Snowdonia National NPA	Number of people engaged with projects	To report back on individual projects within the NP	People counts	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown
Number	Designation	What?	Why?	How?	When?	Who?	Data Holder	Data Availability	Reporting	Notes
1	Brecon Beacons NPA	Red grouse counts	Indicator of SSSI condition	Walk up counts	2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018	Volunteers with BBNPA ecologist (Bradley Welch)	BBNPA and Biodiversity Information Services (BIS)	Data will be available from BIS	Unknown	Done annually on two sites (Hetterral Hill and Mynydd Isaf) usually in September. There are historical data sets prior to 2008 which were surveyed using a different methodology (birds shot counts). BBNPA are aware that there are others (e.g. NT) doing similar surveys, but don't hold any more information.
2	Brecon Beacons NPA	Vegetation survey	Condition monitoring, designation reporting	Phase 1 survey	1998	BBNPA and NRW	NRW	Data presumably available from NRW	Unknown	BBNPA aim to survey every 20 years. The data will eventually go to BIS (in the process of doing it)
3	Brecon Beacons NPA	Peatland assessment	Done in conjunction with the all Wales peatland assessment	ICN peatlands survey	(some data collected but more to come)	BBNPA	SNPA	Partners of the project have an agreement to share data for the purposes of the project.	Unknown	This work is ongoing and involves assessing if a site can be accredited for the peatlands code. BBNPA may also use this methodology on other sites on the Park.
4	Brecon Beacons NPA	Dwarf shrub condition	Indicator or SSSI condition	Common standard method	2003, 2013	BBNPA	BBNPA and BIS	Data available from BIS	Unknown	The first done on the whole of Mynyddoedd
5	Brecon Beacons NPA	Mammal trapping	Education purposes. School groups	Common mammal traps	Several times a year, 20+	(with school groups). Educational officer	BBNPA and BIS	Data available from BIS	Unknown	This is done at Dan y Wenallt visitor centre
6	Brecon Beacons NPA	Butterfly Monitoring Scheme	Indicator or SSSI condition	Common butterfly monitoring survey	May - September (at least 10 years)	Volunteer	BIS and the Butterfly Conservation	Data available from BIS	Unknown	The volunteer is the vice county bird recorder. This is one example of one survey done by an individual. There are probably others that the BBNPA are unaware of. Going to all the Local
7	Brecon Beacons NPA	Bees	National monitoring	Bumble bee conservation standard survey method	Unknown	Bumble Bee Conservation Trust	Bumble Bee Conservation	Unknown	Unknown	Unknown
8	Brecon Beacons NPA	Plants	National plant monitoring scheme	Unknown	Unknown	Plant Life	Plant Life	Unknown	Unknown	Unknown
9	Brecon Beacons NPA	Bracken treatment efficacy	To evaluate a bracken management project funded by the SMS partnership project.	Using transect plant survey within the treated sites	2018	BBNPA Senior Ecologist	BBNPA and BIS	(will be available through BIS)	Unknown	Should continue annually for at least 5 years, maybe more. Mynyddoedd Duon.
10	Brecon Beacons NPA	Peatland restoration efficacy	Evaluate a peatlands management project funded through the SMS partnership project.	Site specific plant surveys	2018	BBNPA Senior Ecologist	BBNPA and BIS	(will be available through BIS)	Unknown	Should continue annually for at least 5 years, maybe more. Mynyddoedd Duon.
11	Brecon Beacons NPA	Condition assessments	Grassland condition assessment for SSSI reporting	Common standard methodology	2015	BBNPA and NRW	Unknown	Some data available from BIS	Unknown	BBNPA is leading on this with NRW joining up in the past. BBNPA aim to survey Llangasty and
12	Brecon Beacons NPA	Bird monitoring	Understand trends	Constant effort monitoring scheme	...annually but dates unknown	The Llangors ringing group	The Llangors	BTO	Unknown	Data might go to BIS but not sure
13	Brecon Beacons NPA	Bats	Protected species	Standardise count	Unknown	Bat Conservation	Bat Conservation	BBNPA	Unknown	Not sure if BIS have the data.
14	Brecon Beacons NPA	Bats	Protected species and SSSI and SAC feature	Standardise Count	1980s, 1990s	Vincent Wildlife Trust (VWT)	Vincent Wildlife Trust (VWT)	(will be available through BIS)	Unknown	Done at Buckland Coach House (mainly lesser horseshoe bat, maternity roost).
15	Brecon Beacons NPA	Water vole	SAC protected species	Standard Field Signs Survey	Unknown	BBNPA and NRW	BBNPA and NRW	BBNPA and NRW	Unknown	Monitoring has taken place in an ad-hoc manner since the reintroduction in 2005. Led by NRW and
16	Brecon Beacons NPA	3 aquatic invasive species: Japanese knotweed, Himalayan balsam, giant hogweed. Targeted	Habitat management - via current BBNPA INNS project	Sites surveys	Started 2018 as a 2 year project, and using existing data in BIS	Bev Louise (INNS officer for the BBNPA)	BBNPA and BIS	Data available from BIS	Unknown	Wysg & Tawe catchments
17	Brecon Beacons NPA	Crassula helmsii	Habitat/species management	Sites surveys	2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015,	Internal staff: wardens, ecologist	BBNPA	Data available from BIS	Unknown	Mynydd Illtyd
18	Brecon Beacons NPA	Lower Plants	SAC monitoring	Common standard	2017?	Contractor	BBNPA and BIS	Data available from BIS	Unknown	This has been done at least twice but dates
19	Brecon Beacons NPA	Colchicum & bracken	SSSI condition monitoring	Common standard	Unknown	Conservation officer	NRW	Unknown	Unknown	This is done annually but date of initial survey's
20	Brecon Beacons NPA	Biodiversity audits of key settlements	Planning requirements for planning policy Wales	Phase 1 survey	2012 (original)	Commissioned under the previous planning grant	BBNPA and BIS	Data available from BIS	Unknown	Phase 1 with some aspects of phase 2 (trees). This led to the supplementary planning guidance
21	Brecon Beacons NPA	Landscape Character Assessment	Assessing Landscape features	Standard LCA methodology	2012	Was done externally	BBNPA	BBNPA	https://www.beacons-npa.gov.uk/planning/graft-strategy-and-	Unknown
22	Brecon Beacons NPA									In planning, we don't actually monitor any environmental change directly. We have access to a large number of 'ecological survey information' provided by applicants for planning permission on individual sites, from which I don't think we undertaken any meta-analysis e.g. on INNS / protected species.
Number	Designation	What?	Why?	How?	When?	Who?	Data Holder	Data Availability	Reporting	Notes
1	Pembrokeshire Coats NPA	Habitat condition monitoring	Measure conservation land management program	Professional judgment	2012, 2013, 2014, 2015, 2016, 2017, 2018,	PCNPA staff	PCNPA	Available	http://www.pembrokeshire.gov.uk/ObjView.aspx?Object_ID=13028&language=	Unknown

6.7 Interview Records

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Brecon Beacons National Park Authority

Question 2:

What is your role and responsibilities?

Paul Sinnadurai

Natural Resources Manager for the Brecon Beacons National Park Authority. He line manages the leads for Rights of Way, Countryside Access, Ecology and Biodiversity, and Warden Service.

Bradley Welch

Senior Ecologist and Climate Adaptation Officer

Rebecca Price

Ecologist and leading on developing a Nature Recovery Action Plan for the BBNPA.

Bridget Schofield

BBNPA Planning Officer

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Prior Score
1	Biodiversity	Plant diversity	1
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	2
5	Climate Change mitigation	Soil carbon	4
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	3
6	Soil and Water Management	Headwater stream macroinvertebrate community	
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
9	Landscape, Historic Environment and Access	Visual Quality Index	5
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

Question 5: Prioritise your top four modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	2
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	1
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	4
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	3

Question 6: Is there anything else you would like to add?

Monitoring in DLs

- There is a lot happening but BBNPA are not in a position to know where all this information is. Saying that, a **new Evidence Officer** will be appointed in May which could contribute towards this work. The new officer will be leading on the: NP Management Plan, State of the Park Report, Sustainability Assessment, Strategic Evidence Assessment and the HR Assessment.
- It might be worth liaising with Professor Mike Bruford FLSW (Co-director Sustainable Places Research Institute, Cardiff University's School of Biosciences) on the work of the **Wales Biodiversity Partnership**, as they have carried out similar work.
- It would be valuable to initially liaise with all **vice county record centres** (Cofnod, BIS) to establish all the evidence they hold for DLs. BBNPA gives all data to BIS.

GMEP data extraction

- BBNPA would be interested in all GMEP for the Park. They found it challenging to prioritise without knowing the extent of the information available.
- Even though it wasn't on the list given, BBNPA would be very much interested in soil indicated by biological measurements.

Modelling

- BBNPA would be very interested in modelling looking at accessible green spaces for people within National Parks compared to other areas in Wales (e.g. urban)

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Clwydian Range and Dee Valley AONB

Question 2:

Howard Sutcliff
AONB Officer

David Shiel
Assistant AONB Officer

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Priority Score
1	Biodiversity	Plant diversity	2
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	5
5	Climate Change mitigation	Soil carbon	3
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	4
6	Soil and Water Management	Headwater stream macroinvertebrate community	
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	5*
9	Landscape, Historic Environment and Access	Visual Quality Index	1
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

* Would be interested if no data was available for linear features in square

Question 5: Prioritise your **top four** modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	2
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	3
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	4
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	1

Question 6: Is there anything else you would like to add?

What will happen to agriculture post Brexit regarding designated landscapes. Public goods should be targeted to special qualities of designation.

What we would like:

- Data cut for AONB
- Fixed points photography along Offa's Dyke National Trail
- Noise pollution/tranquillity data
- Visual intrusion

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Snowdonia National Park Authority

Question 2:

Rhys Owen

Head of Conservation, Woodlands & Agriculture

Dafydd Roberts

Senior Ecologist

Marian Pye

Welsh Peatlands Sustainable Management Scheme Project Manager

Gethin Davies

LIFE Celtic Rainforests Senior Project Manager

Geraint Williams

LIFE Celtic Rainforests Project Officer

Elen Hughes

Research/Planning Assistant (Policy)

Dani Robertson

Dark Skies Project Officer

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Priority Score
1	Biodiversity	Plant diversity	1
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	2
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	
5	Climate Change mitigation	Soil carbon	3
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	4*
6	Soil and Water Management	Headwater stream macroinvertebrate community	4*
7	Soil and Water Management	Pond quality	

8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
9	Landscape, Historic Environment and Access	Visual Quality Index	5
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

4* - Would it be possible to combine the two under one vote, as they're combined in the explanation table?

Question 5: Prioritise your **top four** modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	2
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	2
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	3
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	1

Questions 6: Is there anything else you would like to add?

Filling in the table

Other organisations carrying out monitoring work within the NP:

- Mammals in a Sustainable Environment
- Welsh Raised Bogs – NRW
- North Wales Mammal Group
- Environment Change Network
- Fishing Clubs

- Snowdonia Society
- Whale and Dolphin Conservation

Other data sources within the NP – Officers not present at meeting:

- Cynllun Eryri – Helen Pye
- Thomas Jones - Cultural Heritage Project Officer
- Bethan Jones – Snowdon Warden
- John Roberts – Carneddau Partnership Officer
- Recreation and Access

Modelling

Would be interested in modelling work involving:

- INNS
- Soil and land-use emissions under Brexit scenarios
- Groundwater sustainability under Brexit and climate change scenarios
- Human effects on erosion linked with land use such as woodland, dairy farming

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Gower Area of Outstanding Natural Beauty

Question 2:

Chris Lindley
AONB Team Leader

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Prior Score
1	Biodiversity	Plant diversity	
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	2
5	Climate Change mitigation	Soil carbon	
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	3
6	Soil and Water Management	Headwater stream macroinvertebrate community	5
7	Soil and Water Management	Pond quality	4
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	1
9	Landscape, Historic Environment and Access	Visual Quality Index	
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

Question 5: Prioritise your top four modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	4
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	2
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	3
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	1

Question 6: Is there anything else you would like to add?

GMEP data extraction

Gower AONB ruled out **Presence and length of Public Rights of Way** and **Woodland ground flora biodiversity**. The AONB has access to data on length and condition of paths through the Swansea highway authority. As the Gower isn't very woody, the amount of woodland is highly designated and they have access to the data.

Number 1 priority is Condition of HEFs as there isn't any data available on these in the AONB. No work of its kind has been done in the Gower before. Definitely have an interest in hedgerows as all the hedgerows are mapped in the Gower as they are a feature of the AONB, therefore having information on the condition would be of interest.

Modelling

From Bridget's modelling presentation on Brexit scenarios, an increase in dairy in places like Pembrokeshire would have potential impact on water quality on the Gower Peninsula, therefore new agriculture scheme testing and water quality are Gower AONB's modelling priorities.

Woodland again was lower in priority.

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Llŷn Area of Outstanding Natural Beauty

Question 2:

Bleddyn Jones
AONB Manager

Elin Wyn Hughes
Project Officer

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Prior Score
1	Biodiversity	Plant diversity	2
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	
4	Biodiversity	Floral abundance

5	Climate Change mitigation	Soil carbon	3
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	
6	Soil and Water Management	Headwater stream macroinvertebrate community	5
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
9	Landscape, Historic Environment and Access	Visual Quality Index	4
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

Question 5: Prioritise your **top four** modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	3
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	4
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	1
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	2

Question 6: Is there anything else you would like to add?

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Pembrokeshire Coats National Park Authority

Question 2:

Sarah Mellor
Biodiversity Officer

Mair Thomas
Performance and Compliance Coordinator

Phill Barlow
Research and Sustainability Appraisal Officer

Michel Regelous
Conservation and Policy Officer

Geraint Jones
Farm Conservation Officer

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Prior Score
1	Biodiversity	Plant diversity	4
2	Biodiversity	Birds	
3	Biodiversity	Pollinators	5
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	2
5	Climate Change mitigation	Soil carbon	
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	3
6	Soil and Water Management	Headwater stream macroinvertebrate community	1
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
9	Landscape, Historic Environment and Access	Visual Quality Index	
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	

Question 5: Prioritise your **top four** modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	4
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	3
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	2
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	1

Question 6: Is there anything else you would like to add?

Monitoring

Unclear as to how valuable the cookie cutting will be. PCNPA would be interested in getting all the available data for the Park as prioritising without knowing full extent of data for designation proves to be challenging.

Finds the Glastir Outcome and the resilient figures on the GMEP at a glance document really interesting and effective and would be very interested in getting the same figures for the NP if possible. Would also be interested in finding ways to improve our state of the park and make it more robust.

Modelling

Getting the landchange data done by farm returns from Welsh Government would be extremely valuable for PCNPA as there is 2/3's of data in NP inaccessible.

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Anglesey AONB

A fully completed questionnaire was not recorded for this DL Body – the entries in the What/Why/Who table (Appendix 6.4) were recorded and are shown in that table. Preferences were recorded (below).

Question 2:

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Priority Score
1	Biodiversity	Plant diversity	
2	Biodiversity	Birds	1
3	Biodiversity	Pollinators	2
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	
5	Climate Change mitigation	Soil carbon	3
6	Soil and Water Management	Headwater stream habitat quality (River Habitat Survey)	
6	Soil and Water Management	Headwater stream macroinvertebrate community	
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	
9	Landscape, Historic Environment and Access	Visual Quality Index	5
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	4
12	Woodland creation and management	Woodland ground flora biodiversity	

Question 5: Prioritise your top four modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	4
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	3
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	1
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	2

Question 6: Is there anything else you would like to add?

Areas of Outstanding Natural Beauty and National Parks of Wales Monitoring Review Questionnaire

Question 1:

Wye Valley AONB

Question 2:

Nick Critchley – AONB Development Officer

(A prior meeting had taken place between Nick Critchley and the AONB Manager, Andrew Blake)

Question 3:

Fill in why, what, when, how table with questioner.

Question 4:

In the table of GMEP outcomes and collected data, prioritise your **top five** preferred data extraction for designated landscapes in the fourth column.

Ref	GMEP Outcome	Data collected	Designation Priority Score
1	Biodiversity	Plant diversity	
2	Biodiversity	Birds	5
3	Biodiversity	Pollinators	3
4	Biodiversity	Floral abundance	
4	Biodiversity	Linear features condition	
5	Climate Change mitigation	Soil carbon	2
6	Soil and Water Management	Headwater stream habitat quality (River Hab Survey)	
6	Soil and Water Management	Headwater stream macroinvertebrate community	5*
7	Soil and Water Management	Pond quality	
8	Landscape, Historic Environment and Access	Condition assessment of Historic Environment Features	4
9	Landscape, Historic Environment and Access	Visual Quality Index	
10	Landscape, Historic Environment and Access	Presence and length of Public Rights of Way, including open access areas and beaches.	
12	Woodland creation and management	Woodland ground flora biodiversity	1

5 - Headwater stream would be more of an interest than birds, if there was a square in the AONB with headwater stream data.*

Question 5: Prioritise your top four modelling scenarios for AONB and National Parks

Modelling Scenario	Details	Designation Priority Score
Woodland (different special options, benefits)	To explore which tree species would be best suited for the different soil types and climate conditions within the NPs and AONBs. The potential carbon and climate mitigation that could result can then be extracted and by linking to the GMEP Visual Quality Index such that the impact on landscape aesthetics could also be explored.	3
Water quality (Brexit modelling for water quality)	To better understand the potential outcomes of different Brexit deals and / or different management being considered for inclusion in the new Farm Sustainability Scheme with respect to water quality across the NPs and AONBs.	2
Coastal management (paths/biodiversity)	To explore the potential outcomes of either Brexit trade deals and / or different management interventions being considered for inclusion in the new Farm Sustainability Scheme on coastal systems including visual quality, recreation and land-sea transfers of contaminants e.g. nutrients and pathogens to bathing waters.	4
New agriculture scheme testing	To explore the potential outcomes of the management interventions being considered for inclusion in the new Farm Sustainability Scheme with respect to issues of interest e.g. water quality, climate mitigation, public health/air quality, recreation, bird diversity and abundance etc.	1

Question 6: Is there anything else you would like to add?

Monitoring in the AONB

Monitoring by the AONB is very much project driven and done either to report back on individual project or to gather evidence to demonstrate the need for a specific project e.g. the river walk monitoring Japanese knotweed; carried out for practical purposes. Monitoring is therefore done in short term manner, as and when it's required.

The AONB is aware of other monitoring taken place but not in the position to know details. Cross county and national border also proves to be challenging in getting comparable data, and data for the designation as a whole.

Recording bodies for the Wye AONB:

- South East Wales Biodiversity Record Centre
- Gloucestershire Wild Life Trust Centre for Environment Records
- Hereford Biological Record Centre

There are groups which would have information about volunteer numbers such as the Monmouth Meadows volunteer group. They would hold information on who are actively managing meadows and engaged and interested, which could be an indicator of where the meadows are. Other groups are Hereford Meadows Network Group and Parish Grasslands Gloucestershire.

The AONB (together with all English AONB and NP) is provided with a Monitoring Environmental Outcomes in Protected Landscapes (MEOPL) Framework statistics from Natural England annually. Data included SSSI condition, agriculture scheme, priority habitats, and historical environmental features.

Prioritised data extraction

The AONB would be interested in whatever ERAMMP has for the designation. Prioritising proved to be difficult without knowing the extent of the available data. The AONB would be flexible with priorities depending on data available.

Modelling

Coastal modelling is not a priority for obvious reasons, neither is woodland as the designation is so heavily wooded already.
